

D3 General Update Pattern

Mollie Pettit • @MollzMP

"the data join"

Enter

The Data Join

Data

DOM

```
var data = [  
  {id: 1, value: 5},  
  {id: 2, value: 10},  
  {id: 3, value: 15},  
  {id: 4, value: 20},  
  {id: 5, value: 25}  
];
```

svg

```
var boxes = svg.selectAll('rect')  
  .data(data)  
  .enter().append('rect')  
  .attr('width', 50)  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30 });
```

The Data Join

Data

```
var data = [  
  {id: 1, value: 5},  
  {id: 2, value: 10},  
  {id: 3, value: 15},  
  {id: 4, value: 20},  
  {id: 5, value: 25}  
];
```

DOM

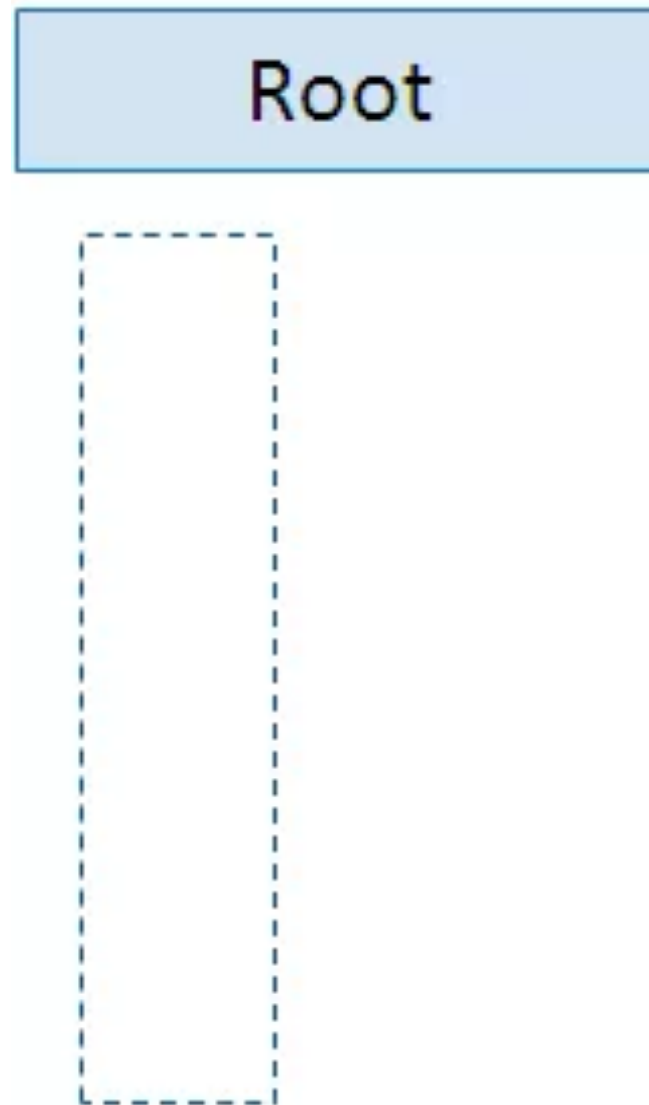

svg

```
var boxes = svg.selectAll('rect')  
  .data(data)  
  .enter().append('rect')  
  .attr('width', 50)  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30; })
```

.selectAll()

Root

A diagram illustrating the concept of selecting all elements from a root. At the top, a light blue rectangular box with a thin blue border contains the word "Root" in a dark purple font. Directly below this box is a tall, narrow rectangle defined by a dashed blue line. This dashed rectangle represents the set of all elements selected by the .selectAll() method, starting from the root node.

Enter

Data

```
var data = [  
  {id: 1, value: 5},  
  {id: 2, value: 10},  
  {id: 3, value: 15},  
  {id: 4, value: 20},  
  {id: 5, value: 25}  
];
```

DOM

svg

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data)  
  .enter()  
  .append('rect')  
  .attr('width', function(d) { return d.value })  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30 })
```

Enter

Data

```
var data = [  
  {id: 1, value: 5},  
  {id: 2, value: 10},  
  {id: 3, value: 15},  
  {id: 4, value: 20},  
  {id: 5, value: 25}  
];
```

DOM

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data) //bind data to selection of rects (selection is currently empty; placeholders created)  
  .enter()  
  .append('rect')  
  .attr('width', function(d) { return d.value })  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30 })
```

Enter

Data

```
var data = [  
  {id: 1, value: 5},  
  {id: 2, value: 10},  
  {id: 3, value: 15},  
  {id: 4, value: 20},  
  {id: 5, value: 25}  
];
```

DOM

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data) //bind data to selection of rects (selection is currently empty; placeholders created)  
  .enter() //determines which data is not yet represented in the DOM  
  .append('rect')  
  .attr('width', function(d) { return d.value })  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30 })
```

Enter

Data

```
var data = [  
  {id: 1, value: 5},  
  {id: 2, value: 10},  
  {id: 3, value: 15},  
  {id: 4, value: 20},  
  {id: 5, value: 25}  
];
```

DOM

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data) //bind data to selection of rects (selection is currently empty; placeholders created)  
  .enter() //determines which data is not yet represented in the DOM  
  .append('rect') //appends a rect for each entering element  
  .attr('width', function(d) { return d.value }) //define necessary attributes  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30 })
```

Enter returns elements in the data *not* in the DOM

What if there are already
rectangles in the DOM?

Update

Update

Data

```
var data = [  
  {id: 1, value: 1},  
  {id: 2, value: 2},  
  {id: 3, value: 3},  
  {id: 4, value: 4},  
  {id: 5, value: 5}  
];
```

DOM

id: 1 width: 5

id: 2 width: 10

id: 3 width: 15

id: 4 width: 20

id: 5 width: 25

svg

```
var boxes = svg.selectAll('rect')  
  .data(data)  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Update

Data

```
var data = [  
  {id: 1, value: 1},  
  {id: 2, value: 2},  
  {id: 3, value: 3},  
  {id: 4, value: 4},  
  {id: 5, value: 5}  
];
```

DOM

svg

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data)  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Update

Data

```
var data = [  
  {id: 1, value: 1},  
  {id: 2, value: 2},  
  {id: 3, value: 3},  
  {id: 4, value: 4},  
  {id: 5, value: 5}  
];
```

DOM

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data) //binds data to selection of rects. Return elements that match. No placeholder elements  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Update

Data

```
var data = [  
  {id: 1, value: 1},  
  {id: 2, value: 2},  
  {id: 3, value: 3},  
  {id: 4, value: 4},  
  {id: 5, value: 5}  
];
```

DOM

id: 1 width: 1
id: 2 width: 2
id: 3 width: 3
id: 4 width: 4
id: 5 width: 5

svg

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data) //binds data to selection of rects. Return elements that match. No placeholder elements  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Data returns elements in the data *and* on the DOM

Exit

Exit

Data

```
var data = [  
  {id: 1, value: 10},  
  {id: 2, value: 20}  
];
```

DOM

```
var boxes = svg.selectAll('rect') //select all rects in svg  
  .data(data)  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Exit

Data

```
var data = [  
  {id: 1, value: 10},  
  {id: 2, value: 20}  
];
```

DOM

svg

```
var boxes = svg.selectAll('rect')  
  .data(data) //binds data to selection of rects. Return elements that match. No placeholder elements  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Exit

Data

```
var data = [  
  {id: 1, value: 10},  
  {id: 2, value: 20}  
];
```

DOM

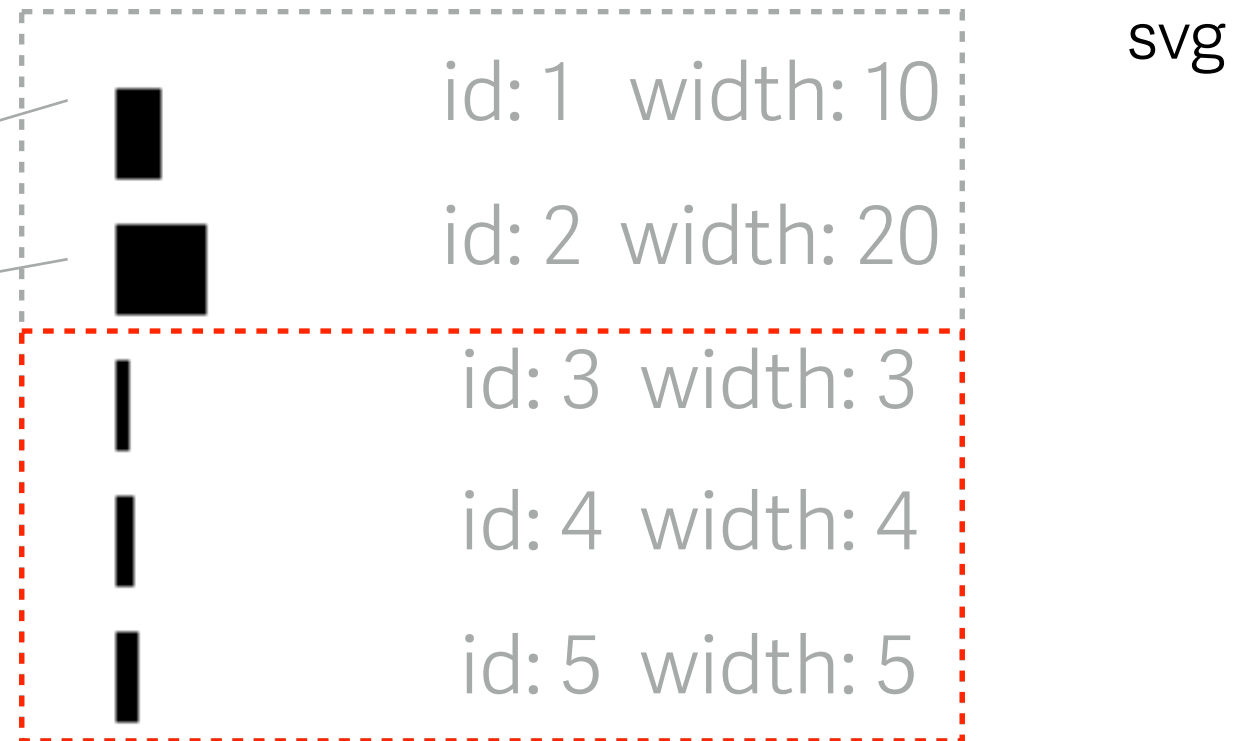

```
var boxes = svg.selectAll('rect')  
  .data(data) //binds data to selection of rects. Return elements that match. No placeholder elements  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

Exit

Data

```
var data = [  
  {id: 1, value: 10},  
  {id: 2, value: 20}  
];
```

DOM

```
var boxes = svg.selectAll('rect')  
  .data(data) //binds data to selection of rects. Return elements that match. No placeholder elements  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data  
  
boxes.exit() //returns elements in DOM no longer in the data  
  .remove()
```

Exit

Data

```
var data = [  
  {id: 1, value: 10},  
  {id: 2, value: 20}  
];
```

DOM

```
var boxes = svg.selectAll('rect')  
  .data(data) //binds data to selection of rects. Return elements that match. No placeholder elements  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data
```

```
boxes.exit() //returns elements in DOM no longer in the data  
  .remove() //removes elements from the screen
```

Exit returns elements in the DOM *not* in the data

Update and enter

Update and Enter

Data

```
var data = [  
  {id: 1, value: 20},  
  {id: 2, value: 20},  
  {id: 3, value: 30},  
  {id: 4, value: 40}  
];
```

DOM

id: 1 width: 10

id: 2 width: 20

svg

```
var boxes = svg.selectAll('rect').data(data)
```

```
var boxes = boxes  
  .enter().append('rect')  
  .merge(boxes)  
  .attr('width', function(d) { return d.value })  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30})
```

Update and Enter

Data

```
var data = [  
  {id: 1, value: 20},  
  {id: 2, value: 20},  
  {id: 3, value: 30},  
  {id: 4, value: 40}  
];
```

DOM

```
var boxes = svg.selectAll('rect').data(data) // binds data to selection of rects. Return elements  
that match. No placeholder elements
```

```
var boxes = boxes  
  .enter().append('rect')  
  .merge(boxes)  
  .attr('width', function(d) { return d.value })  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30})
```

Update and Enter

Data

```
var data = [  
  {id: 1, value: 20},  
  {id: 2, value: 20},  
  {id: 3, value: 30},  
  {id: 4, value: 40}  
];
```

DOM

```
var boxes = svg.selectAll('rect').data(data) // binds data to selection of rects. Return elements  
that match. No placeholder elements
```

```
var boxes = boxes  
  .enter().append('rect') // appends a rect for each entering element  
  .merge(boxes) //Merge update applies changes to entering AND updating rects  
  .attr('width', function(d) { return d.value }) //sets width value in DOM using new data  
  .attr('height', 20)  
  .attr('x', 0)  
  .attr('y', function(d, i) { return i * 30})
```

Summary

- Enter returns elements in the data *not* in the DOM
- Exit returns elements on the DOM *not* in the data
- Data (update selection) returns elements in the data *and* on the DOM
